ABOUT ME

Full-Stack Developer and Software Engineering graduate with experience building scalable web and mobile applications. Proficient in JavaScript/TypeScript ecosystems (React, Next.js, Node.js, Nest.js) and mobile development using Flutter. Proven track record of adapting quickly to diverse environments, spanning on-site internships and collaborative remote teams. Focused on writing clean, maintainable code that solves complex technical challenges and delivers business value.

EXPERIENCE

The Tann Mann Foundation | July 2025 - December 2025

Remote Flutter Developer

- Contributed to Swiftze, a multi-tenant e-commerce mobile application, developing tailored workflows and responsive interfaces for Tailor, Driver, and Customer user roles.
- Architected state management solutions using Bloc to handle complex application logic, asynchronous data streams, and predictable UI states efficiently
- Utilized Git for version control, effectively managing feature branches, participating in code reviews, and ensuring smooth deployment pipelines
- Collaborated within an Agile environment, actively participating in sprint ceremonies to receive technical tasks, present feature implementations, and align development goals with the team.

Alyah Software Development PLC | March 2025 - June 2025

Full Stack Developer Intern

- Developed a secure full-stack donation platform utilizing the **MERN stack (MongoDB, Express.js, React, and Node.js)** to support end-to-end contribution workflows.
- **Dockerized** the application environment by creating multi-stage container builds, ensuring consistent and streamlined development-to-production deployment pipelines.
- Integrated secure payment method (Chapa) and built comprehensive donor and administrator management dashboards, improving system reliability and user experience.
- Implemented Cloudinary API integrations to handle optimized image uploading, cloud asset storage, and media delivery across the platform.

SKILLS

Languages & Frameworks: JavaScript, TypeScript, Go (Golang), React, Next.js, Node.js, Express.js, Nest.js, Gin, Flutter

Databases & Cloud Storage: PostgreSQL, MongoDB, Firestore, Cloudinary

Tools & DevOps: Docker, Git, GitHub Actions

Architecture & Practices: RESTful APIs, GraphQL, WebSockets, JWT, Agile/Scrum, Bloc State Management

EDUCATION

BSc in Software Engineering

Bahir Dar University | September 2022 - June 2026

PROJECTS

- **BiT Final year Project Managment System |** React, Node.js, PostgreSQL[view live]
  Developed a multi-actor web platform for Bahir Dar University Faculty of Computing featuring dedicated dashboards for students, advisors, and administrators to simplify project selection, tracking, and workflow management.
- **NileVerse |** React, Express.js, Binance & CoinGecko APIs | [view live]
  A cryptocurrency blog platform with live market data feeds, interactive user dashboards, and secure authentication.
- **BruhAI |** Next.js, Express.js, PostgreSQL | [view live]
  Unified platform aggregating multiple AI models into a single, high-performance interface with secure database management.
- **Gursha Flavors |** Flutter
  A restaurant mobile app featuring advanced item filtering, seamless payment options, and integrated map tracking.
- **Roha Picks |** React, RESTful & GraphQL APIs, MongoDB| [view live]
  Movie recommendation platform with video trailer playback, user favorites tracking, and hybrid API architectures.
